SHIRLEY S. BURNS : BRINGING DOWN THE MOUNTAINS: THE IMPACT OF MOUNTAINTOP REMOVAL SURFACE COAL MINING ON SOUTHERN WEST VIRGINIA COMMUNITIES (WEST VIRGINIA APPALACHIA)

before purchasing it in order to gauge whether or not it would be worth my time, and all praised BRINGING DOWN THE MOUNTAINS: THE IMPACT OF MOUNTAIN REMOVAL SURFACE COAL MINING ON SOUTHERN WEST VIRGINIA COMMUNITIES (WEST VIRGINIA APPALACHIA):

4 of 4 people found the following review helpful. Politically Corrupt Men (and Women) destroying W. Virginia's mountains. By A. Starkey The fight has been raging in W. Virginia for decades over coal. Coal is the major employer in this area, and of course no one wants to lose their jobs. However, the politicians want citizens to believe that their new method of mining - namely stripping away the mountains, is safe and the mountains can be rebuilt. Not so. What you get is a slob of mess, with the FOUNDATION of the mountain gone, along with the beautiful trees and habitats for animals. The pictures in this book are graphic, and anyone who loves nature will cry. What is being done to our mountains is a travesty of justice and needs to be STOPPED. This author is not afraid to explain, in detail, just how bad the problem is, and what the strip mining will do for generations. I highly recommend this book for ANYONE in the USA because it also tells a story of political corruption to fight to continue a practice that is proven fatal to the environment just to keep a few men rich. 2 of 2 people found the following review helpful. Great Book By Capital Truth I really liked this book. As far as really investigating MTR in West Virginia as not just a political/economic issue, but as a social issue with lots of dimensions, this is one of the top two or three books out right now. It is fluid and gracefully written as well, making it easy to get into. I would strongly suggest this book to anyone from WV (like myself), interested/concerned about MTR practices, interested in Appalachian culture, or taken up by American history. 0 of 0 people found the following review helpful. A must read for those of us who love the mountains By #1 Fan An informative book about the tragic plight of our majestic southern mountains, and their inhabitants. A must read for those concerned about the damage being done to our environment in the name of coal.

Coal is West Virginia's bread and butter. For more than a century, West Virginia has answered the energy call of the nation—and the world—by mining and exporting its coal. In 2004, West Virginia's coal industry provided almost forty thousand jobs directly related to coal, and it contributed \$3.5 billion to the state's gross annual product. And in the same year, West Virginia led the nation in coal exports, shipping over 50 million tons of coal to twenty-three countries. Coal has made millionaires of some and paupers of many. For generations of honest, hard-working West Virginians, coal has put food on tables, built homes, and sent students to college. But coal has also maimed, debilitated, and killed. *Bringing Down the Mountains* provides insight into how mountaintop removal has affected the people and the land of southern West Virginia. It examines the mechanization of the mining industry and the power relationships between coal interests, politicians, and the average citizen. Shirley Stewart Burns holds a BS in news-editorial journalism, a master's degree in social work, and a PhD in history with an Appalachian focus, from West Virginia University. A native of Wyoming County in the southern West Virginia coalfields and the daughter of an underground coal miner, she has a passionate interest in the communities, environment, and histories of the southern West Virginia coalfields. She lives in Charleston, West Virginia.

"*Bringing Down the Mountains* is a clear and impassioned account of the devastation being visited upon the mountains of southern West Virginia by the coal industry. Read it and weep." Denise Giardina, author *Storming Heaven* and *The Unquiet Earth* "Shirley Stewart Burns... reminds us that the effects of certain economic practices might still be described in such old-fashioned terms as 'devastation' and 'destruction.'" Tycho de Boer, *The Journal of Southern History* "[Burns] exercises considerable skill in detailing the expansion of mountaintop removal (MTR) and its growing opposition." Chad Montrie, author *Making a Living: Work and Environment in the United States* "Burns offers a cautionary tale of the future... The crisis Burns defines has implications for all of us and for our children. This book deserves a wide audience." John H. Barnhill, *Technology and Culture* "*Bringing Down the Mountains* is one of the finest books yet regarding mountaintop removal mining and the destruction of the Appalachian culture and environment. Shirley Stewart Burns has written the most comprehensive account of the struggle that has been taking place in the coalfields of southern West Virginia and the long-term ecological and social consequences of mountaintop removal mining. It is a thoroughly researched and eloquent book that brings alive the true voices and great dignity of a courageous people." Jack Spadaro, former Superintendent of the National Mine Health and Safety Academy "Everyone in America should read this important book. Shirley Stewart Burns understands this complex issue intimately, and she eloquently explains it from all the various angles, exposing the horrors of mountaintop removal and the way it is not only destroying the heart of a place and its people, but also affecting everyone. This is the perfect book for anyone who wants to educate themselves on this disturbing, irresponsible, and disrespectful form of Big Business gone awry." Silas House, author *Clay's Quilt* and *The Coal Tattoo* "Written with passion and a sense of urgency, *Bringing Down the Mountains* is one of the most important resources available on the causes and consequences of mountaintop removal. It is historically grounded and well-documented but also remarkably current and accessible. It is always informative and alternately infuriating and inspiring as the author recounts the incestuous power relationships between the coal industry and local and national politicians, and the courage and determination of local people fighting to save their

land and heritage. This should be required reading in every high school civics classroom in West Virginia and for all who care about the future of the Appalachian coalfields." Stephen Fisher, editor *Fighting Back in Appalachia: Traditions of Resistance and Change*"Bringing Down the Mountains provides a powerful, fact-filled analysis of controversial mountaintop removal coal mining in the context of more than a century of social, economic and environmental injustice experience by coalfield communities. Shirley Burns shines a bright light on King Coal and its handmaidens who have exploited the vast mineral wealth of the region, reaping huge profits while coal mining communities continue to experience poverty, high unemployment, and economic distress." Patrick McGinley, West Virginia University College of Law"The common ground on mountaintop removal is as narrow as the Appalachian hollows being filled in by MTR. Those on both sides of this deep divide, however, will learn something from this highly readable study which analyzes the issue within its political, economic, environmental, and human context. Written from the community perspective, it gives voice to the powerless who are most dramatically affected by this destructive practice." Ronald L. Lewis, West Virginia University"Bringing Down the Mountains not only tells the story of coalfield residents' fight against mountaintop removal, but it puts this tale into the important historical context of the continuing fight between West Virginians and outside coal interests over the use - and sometimes abuse - of the state's natural resources. Shirley Stewart Burns reminds readers that West Virginia's history is a long series of fights over who benefits and who is damaged by coal extraction, how the riches created by the coal-based economy are divided, and over who decides the outcome of these vital issues." Ken Wards Jr., *The Charleston Gazette*"Bringing Down the Mountains examines one of the most significant challenges facing the Appalachian region: mountaintop removal coal mining (MTR). Shirley Burns's timely and comprehensive study provides the important analyses of the impact of MTR on the environment, people, and communities of southern West Virginia, including economic costs and benefits. While the analyses of community and environmental impacts represent the core of the book, chapters on the United Mine Workers' role in promoting MTR; the history of legal challenges by citizens; and the relationship between the coal lobby, West Virginia's political leaders, and campaign finances are also indispensable sources of insight and information for scholars, activists, and students. This book is a must-read for anyone who loves the Appalachian Mountains or is concerned about the American environment." Dwight B. Billings, University of Kentucky"Too often, critics of mountaintop removal mining in southern West Virginia are thought of as outsiders. Shirley Stewart Burns is a native of the West Virginia coalfields, from a mining family, and in *Bringing Down the Mountains* she speaks with passion and detailed knowledge. She knows these hills; she knows these people. To this she adds a depth of historical research and the persistence of a journalist. She tells stories that should indeed make us weep, for our mountains and for our own appetites that drive this quest for cheap energy, at any cost. This is truly a case in which history can and should change the future we are currently making." Gregory A. Good, West Virginia University"This book is a wake-up call not only for southern West Virginians, but for anyone who uses electricity generated from coal. *Bringing Down the Mountains* is a must-have for students and scholars of energy policy, the environment, economics, politics, organized labor, and Appalachian studies." Katie Fallon, Virginia Tech"*Bringing Down the Mountains* is an invaluable study of mountaintop removal, the most devastating coal mining practice in the United States. Burns brings together history, politics, economics, sociology, ecology, biology, and interviews with coalfield residents with an efficacy and efficiency I've seen in no other book about the subject. Comprehensive and thoroughly documented, *Bringing Down the Mountains* is a work we've needed for a decade and a must-have for anyone concerned about the future of the Appalachian region." Ann Pancake, author *Strange as This Weather Has Been*"*Bringing Down the Mountains* joins a growing list of books that bring new approaches in environmental and socioeconomic analysis to Appalachia's history and struggles." Aviva Chomsky, *LABOR*"*Bringing Down the Mountains* is without a doubt the first book you should read if you want to learn more about Mountaintop Removal, how it came to be, what it does to the earth, and what is being done to try and stop, or at least slow down, this very destructive process." Merrill E. Pratt, *Life in Small Bites*
