Maurice Schiff, Çağlar Özden : International Migration, Economic Development Policy (Trade and Development) before purchasing it in order to gauge whether or not it would be worth my time, and all praised International Migration, Economic Development Policy (Trade and Development):

International migration has become a central element of international relations and global integration due to its rapidly increasing economic, social, and cultural impact in both source and destination countries. This book provides new evidence on the impact of migration and remittances on several development indicators, including innovative thinking about the nexus between migration and birth rates. In addition, the book identifies the effect of host country policies on migration flows, examines the determinants of return and repeat migration, and explores the degree of success of return migrants upon return to their country of origin.

"This volume represents another outstanding contribution of the International Migration and Development Research Program, an effort I strongly supported from its inception and which established the World Bank's intellectual leadership in an increasingly important area. Analysts and policy makers will find that the studies presented here constitute an excellent basis for improving migration policies and enhancing their development and poverty alleviation impact." --James D. Wolfensohn, Chairman, Wolfensohn Capital Partners, Former President of the World Bank

"International migration, long considered an exotic subject, has finally become a significant phenomenon on the world stage. This is an important volume by two of the most influential researchers on the subject. It addresses with considerable insight the key issues that the phenomenon raises. Policy makers and research scholars alike will profit from reading it." --Jagdish Bhagwati, University Professor, Economics and Law, Columbia University, Author of *In Defense of Globalization*

"Migration has become a global phenomenon of utmost importance for the further development and well-being of mankind. This volume collects a fine blend of articles providing rigorous empirical and policy analysis from all over the globe. The new global migration database and contributions on development, host country policy, and return migration will capture the attention of a hungry generation of scholars in migration, labor, and development." --Klaus F. Zimmermann, Director of the Institute for the Study of Labor (IZA), Bonn, Professor at Bonn University
